VETERINARY DIAGNOSTIC SERVICES

Vet-Med-Lab

Owner.....: **Moegeltoft, Lone**
Animal.....: **Cat Tullamore** Age.....: **06 years**
LaboratoryNo: **GE899150/17.08.2006** Your ID.....: **05632072**
Material.....: **EDTA blood**
Clinical information: Chip Nr.208224000504437
Colour: brown stripped
Date of birth: 19/06/2000

Test	Result	(Reference Val) Unit
Hypertrophic Cardiomyopathy		
Breed:	Main Coon	1)
Mutation	none	
Genotype	N/N	2)
Conclusion:		

Interpretation:

2) Genotype: N/N

Interpretation:

The tested cat is not carrying the mutation in the MYBPC-gene (G-C in exon 3), which is thought causing the Hypertrophic Cardiomyopathy (HCM).

A heart disease caused by other, not yet identified mutations, or a disease of other genesis is not excluded by this test.

*** Final report ***

Sincerely Dr. rer. nat. Balzer

Note.....:
