### Gentest hypertrophe Kardiomyopathie (HCM)

#### HCM1:

Result HCM1: genotype N/N

Interpretation: The analyzed cat is a noncarrier of the mutation in the MYPBC gene (G->C in exon 3) which is suggested to be responsible for hypertrophic cardiomyopathy (HCM) in Maine Coon cats and ragdoll. HCM of other genesis especially caused by the other mutation or other unknown mutations can not be excluded by this test. The test result is only valid for the submitted sample and for Maine coon and ragdoll and related breeds.
